

SRL Diagnostics partners with PathPresenter to enable digital pathology consultations

09 March 2023 | News

A significant shift from a microscope-based standard of care to the use of digital whole slide images

SRL Diagnostics has partnered with US-based startup PathPresenter, the global image sharing platform for pathology, to enable digital pathology consultations between SRL's state of the art reference laboratories in Mumbai, Gurugram, and Bengaluru.

SRL Diagnostics will deploy PathPresenter's clinical consultation platform to empower specialist pathologists at the company's reference laboratories to quickly and easily sign-out pathology cases uploaded from remote locations in SRL's laboratory network. This new capability represents a significant shift from a microscope-based standard of care to the use of digital whole slide images, which will help lay the foundation for SRL pathologists to deliver second opinion services that can better inform patient treatment decisions and sets a new benchmark of use of the technology of digital pathology in India.

Announcing the partnership, Anand K, Chief Executive Officer of SRL Diagnostics said "Digital Pathology circumvents the need to travel to a workplace to report cases; thereby ensuring that clinicians and patients get accurate diagnostic insights wherever they are. With widespread adoption, digital pathology will also help us reduce our carbon footprint by reducing the logistical requirements of transporting samples for consultation and review."

Dr Rajendra Singh, Founder of PathPresenter, added "This partnership is in line with our mission to help democratize access to the world's pathology knowledge by connecting pathologists to the vast expertise of their colleagues globally and providing a practical and secure platform to access and use best-in-class AI models."
