

Healthtech startup LifeSigns raises funds in Pre-Series A round

14 March 2023 | News

To expand operations and provide better patient care through continuous patient monitoring system

LifeSigns iMS (a brand by LS Devices), a Chennai-based health-tech startup that is developing a digital wireless patient monitoring solution platform for ambulatory, inpatient, and home care settings, has raised an undisclosed amount in a pre-Series A funding round.

The round witnessed participation from investors, including Dr SP Ganesan, a well-known pathologist from Chennai with 40+ years of experience. The funds raised will be used to accelerate the iMS platform and for India wide expansion.

LifeSigns provides technological solutions for patient monitoring in hospitals, at home and in ambulances. It brings high-quality, clinical-grade patient vital data continuously to healthcare professionals anywhere anytime at a reasonable cost.

The startup has collaborated with private and public government hospitals across India, currently in 48+ hospitals, managing close to 5100+ beds deployed on 28000+ patients including largest private hospital chain and largest public hospital to help them to deliver better cost efficient patient care with most modern technology.
