WIKA India opens new force measurement production unit in Pune

27 July 2023 | News

Force measurement devices find critical applications in various industries including medical equipment, among others

WIKA Instruments India, a wholly-owned subsidiary of WIKA Global (Germany), has recently inaugurated its Force Measurement Production Unit in Pune. With this, the company has taken another major leap towards its successful future growth in the country.

The Force Measurement Production Unit will play a pivotal role in the future technological advancements in WIKA's products. It is one of the major investments made by WIKA India in recent years to strengthen its position in the market and align itself with its aim to double the company's turnover by 2025.

WIKA's Force Measurement Production Unit brings together the company's expertise to create customised force measurement solutions for the industry. The unit is a major step in the company's mission to bring high-quality products to the market in the shortest possible time.

Force measurement devices find critical applications in various industries including automotive, oil and gas and medical equipment, among others. WIKA India has a wide range of force measurement devices, which includes tension and compression force transducers, shear and bending beams, shackle load cells, ring force transducers, load pins, tension links, wire rope force transducers and strain transducers.

WIKA India has manufacturing plants in four states—Maharashtra, Tamil Nadu, Uttar Pradesh and Haryana. The inception of WIKA India began in Pune in 1997 with the establishment of WIKA Instrument. Along with its first calibration facility, the Pune operation is also home to the company's unit for level, calibration and SF6 gas. The addition of the Force Measurement Production Unit is a value addition to the entire operation.
