Stryker introduces Tornier shoulder arthroplasty portfolio in India

26 January 2024 | News

Blueprint planning software allows surgeons to plan their cases in advance

American med tech firm Stryker has introduced the Tornier shoulder arthroplasty portfolio in India and launched its first new Tornier product, the Perform Humeral Stem at Shoulder Conclave in Pune.

On the occasion, Aman Rishi, Vice President and General Manager of Stryker India said, “The precise and personalised approach offered by Tornier Perform shoulder implants and Blueprint will redefine shoulder care and set Stryker apart in the shoulder market in India."

Elevated by Blueprint planning software and the Tornier Perform anatomic and reverse glenoid, the new Tornier Perform Humeral Stem offers clinical solutions for the simplest to most complex shoulder arthroplasty cases. It is intended for use in anatomic, reverse and hemiarthroplasty of the shoulder. It also allows for conversion from an anatomic to a reverse shoulder prosthesis in the case of revision.

The Tornier Perform Humeral Stem was designed with four collar diameters and is available in multiple lengths to optimise humeral fit and give surgeons the power to perform and the options to choose. The focus on smaller stem options makes it ideal for addressing smaller patient anatomies that present unique challenges.
