

Ivory Smiles elevates dental care in Bengaluru with state-of-the-art AI technology

16 February 2024 | News

AI-guided implant placement and digital impressions streamline the treatment process

Ivory Smiles Dental Clinic is introducing advanced artificial intelligence (AI)-controlled dentistry to Bengaluru for the first time. The clinic, with its centres located in HSR Layout and Whitefield, showcases a commitment to leveraging the latest technological innovations in dental care.

With the latest technologies, such as 3D Cone beam CT/OPG and in-house intraoral scanners. Dr Amruta and her team of specialists, backed with advanced digital diagnostics and treatment tools, set Ivory Smiles apart in dental care.

From precise diagnostics aided by digital X-rays and 3D imaging to personalised treatment plans formulated with the help of AI algorithms, the clinic ensures accuracy and efficiency at every step. Digitally guided implant placements allow patients to preview their post-treatment smiles.

In contrast, AI-guided implant placement and digital impressions streamline the treatment process, significantly improving patient comfort and reducing chair-side time.

Dr Amruta, the driving force behind Ivory Smiles, is a renowned periodontist and implantologist. She is also a member of the European Federation of Periodontology and the Indian Society of Periodontology, along with a fellowship degree in oral implantology (FICOI) from the International Congress of Oral Implantology, USA.
