

World's first multiomics lab to be built in Bengaluru

26 February 2024 | News

Vizzhy Multiomics platform promises a paradigm shift in healthcare management

Dr Vishnuvardhan, CEO, Vizzhy has announced the establishment of the world's first Multiomics Lab in Bengaluru, marking a significant leap in healthcare innovation.

The announcement came during the soft launch event of the Vizzhy Multiomics platform, showcasing a pioneering approach to understanding and treating metabolic disorders.

In his address, Dr Vishnuvardhan highlighted the transformative potential of multiomics technology in deciphering the complexities of metabolic diseases. By integrating cutting-edge advancements and collaborations with esteemed institutions like the University of Illinois, Urbana-Champaign (UIUC), Vizzhy aims to revolutionise healthcare delivery.

The Vizzhy Multiomics platform promises a paradigm shift in healthcare management, offering precise insights into individual metabolic profiles. Utilising state-of-the-art equipment and Health AI technology, the lab will empower physicians to identify root causes and provide tailored recommendations for patients.

Moreover, the integration of AI-driven solutions, including digital signatures, will enhance medical decision-making and streamline health record management. Through the "Vizzhy GPT" platform, users can access comprehensive health summaries in multiple languages, facilitating informed healthcare interventions.

The presence of a distinguished delegation from UIUC underscores the global significance of Vizzhy's initiative, heralding a new era of healthcare innovation.
