Axtria expands to Hyderabad with 9th Global Innovation and Capability Centre in India

12 March 2024 | News

Spans 76,000 square feet and is the company's largest office in India

US headquartered Axtria Inc., a global leader in cloud software and data analytics for the life sciences industry, has announced the opening of its new centre in Hyderabad. The new centre contributes to Axtria's mission of helping life sciences companies drive better health outcomes by offering specialised data analytics and artificial intelligence (AI)-driven services, including generative AI.

Axtria's latest centre spans 76,000 square feet and is the company's largest office in India. Located at DLF Cyber City, Gachibowli, Hyderabad, the centre is differently-abled-friendly, and the building has been certified LEED Platinum by the USGBC, the world's highest recognition for sustainable practices and environment-centric planning of modern-day workplace facilities. The centre has been recognised for its initiatives to be a zero-water waste facility and was awarded a Green Star Rating by GRESB.

In 2023 alone, Axtria hired approximately 700 associates, a healthy mix of those with industry experience and fresh talent from campuses for emerging data science, software development, and data engineering roles. In its commitment to address emerging generative AI strategies for life science companies and maintain sustainable hiring, Axtria plans to recruit nearly 800 professionals for its global locations in the next 9-12 months.

With recent expansions in Noida, Pune, and now Hyderabad, Axtria is poised to generate multiple job opportunities.
