HRS Navigation announces aggressive hiring plans for R&D and Clinical Support teams

18 June 2024 | News

The company plans on increasing its workforce by 30% with a blend of new talent and experienced professionals

HRS Navigation, a series A-funded, Bengaluru-based health tech startup pioneering 'Made in India' medical navigation systems, has announced plans to expand its workforce to 30% - 40% this year from its current 90-member-strong team, focusing on its R&D (Research and Development) and Clinical Support teams.

The startup plans on underscoring its strategic growth and long-term success. This expansion will help bolster the company's capabilities and ensure it meets market demands.

Tailored strategically, HRS Navigation’s hiring initiatives will involve recruiting college graduates and training them extensively, bringing fresh perspectives and cultivating future leaders familiar with the company culture.

Additionally, experienced professionals in R&D and Clinical Support are being sought to bring established knowledge and proven expertise. This blend of new talent and seasoned professionals will create well-rounded teams ready to propel the company forward.

The expansion of its R&D and Clinical Support teams is expected to enhance HRS Navigation's products and services significantly. By leveraging top-tier talent and cutting-edge technology, the company aims to make precision technology accessible and affordable worldwide, ultimately improving patient outcomes and transforming lives.

The company is currently seeking individuals skilled in C++ programming and emerging technologies like AI, ML, and computer vision to drive innovation. To facilitate a smooth transition for new team members, a comprehensive induction programme and ongoing support from department heads will also be provided.
