

Botswana Vaccine Institute engages Techinvention for setting up new veterinary vaccine manufacturing facility

03 July 2024 | News

Project involves setting up a new blending and filling block for veterinary vaccines

Mumbai-based startup Techinvention Lifecare has been appointed as a consultant by Botswana Vaccine Institute (BVI) to monitor setting up of the new state-of-the-art and cGMP compliant, vaccine manufacturing unit in its existing facility at Gaborone, Botswana.

The scope encompasses comprehensive project management role for the state-owned Botswana Vaccine Institute (BVI), that has been manufacturing & supplying critical veterinary vaccines since the 1970s, in the region and beyond.

This project involves setting up a new blending and filling block for veterinary vaccines which would be compliant with cGMP requirements alongside other stringent global standards and guidelines.

This initiative aims to enhance the capacity, number of products, quality, efficacy, and safety of the products while ensuring that all regulatory approvals are secured, thus enabling BVI to offer more products that are required in the region and explore new markets.

The project commenced in 2022 and is expected to be completed and operational by 2026.
