

Getinge launches operating room table and surgical light for medtech market in India

06 August 2024 | News

Maquet Corin and Maquet Ezea designed to simplify daily operations for medical professionals

In an effort to enhance efficiency and safety in surgical departments, Swedish medtech firm Getinge has introduced Maquet Corin, a state-of-the-art operating room (OR) table, and Maquet Ezea, an easy to use surgical light. These new products are designed to simplify daily operations for medical professionals while prioritising user-friendly features and advanced safety measures.

Maquet Corin, the OR table from Getinge, offers an intuitive and simple interface that aims to streamline workflow and enhance teamwork among surgical staff.

On the other hand, Maquet Ezea addresses the need of operating room staff, with a focus on durability and user-friendliness. It is built to last and align with evolving risk management standards. Its versatility and simplicity makes it an essential tool for healthcare professionals working in surgical settings.

Maquet Corin is also the very first connected operating table as it provides biomed and service technicians, with the possibility to easily access a wide range of service data and usage statistics, making sure the table is always ready to perform for a surgery.

Aruna Nayak, Managing Director at Getinge India, commented on the launch, "The launch of Maquet Corin and Maquet Ezea represents a significant milestone for Getinge India. These products are a testament to our unwavering commitment to delivering advanced medical technology that meets the highest standards of quality and safety. We are excited to bring these innovations to the Indian market, where they will undoubtedly enhance the capabilities of our healthcare professionals and improve patient outcomes."
