

Jindal IVF expands services to Mandi through strategic partnership with Mandav Hospital

14 August 2024 | News

For essential procedures like Ovum Pickup (OPU) and Embryo Transfer (ET)

Jindal IVF, a leading institute in Assisted Reproductive Technology (ART) and In Vitro Fertilization (IVF), has announced a strategic partnership with Mandav Hospital, Mandi.

This collaboration, effective since July 2024, aims to bring Jindal IVF's renowned fertility treatments closer to the residents of Mandi and surrounding regions. The partnership is designed to enhance patient accessibility and convenience by offering comprehensive fertility services locally, with minimal travel required.

Under this collaboration, Mandav Hospital will serve as the local hub for initial patient screenings, consultations, and counselling sessions. Patients will also receive stimulation treatments, including necessary injections and medication, at Mandav Hospital. These preliminary phases of treatment will be closely reviewed by senior consultants at Jindal IVF Chandigarh, ensuring that patients receive the same high standard of care that Jindal IVF is known for.

Additionally, a counsellor, specially appointed and trained by Jindal IVF, will be stationed at Mandav Hospital to provide personalized support and guidance throughout the treatment process.

Patients will only need to travel to Jindal IVF Chandigarh for essential procedures like Ovum Pickup (OPU) and Embryo Transfer (ET). Following these critical treatments, all post-procedure monitoring and follow-up care will be conveniently managed at Mandav Hospital, under the expert guidance of Jindal IVF's senior consultants. This arrangement not only minimises the need for frequent and lengthy travel but also ensures that patients can receive top-tier fertility care while staying comfortably close to home.
