

Dozee unveils AI-powered remote parent health monitoring service

09 October 2024 | News

Dozee Shravan now enables families abroad to regularly track their parents' health in India

Bengaluru-based Dozee has unveiled Dozee Shravan, a clinical-grade artificial intelligence (AI)-powered Remote Parent Monitoring (RPM) service. Monitoring a parent's health while living overseas is a significant concern for the Indian diaspora.

Dozee Shravan now enables families abroad to regularly track their parents' health in India. Dozee's AI-powered, contactless remote health monitoring technology is designed for seamless use by the elderly.

The health data is securely shared with both families and healthcare providers. Dozee's continuous health monitoring and real-time alerts help detect subtle deviations in vital parameters, ensuring timely medical intervention.

Dozee's Shravan offers continuous, contactless monitoring of vital signs such as heart rate, respiration, blood pressure, and sleep patterns. Built on AI-powered Ballistocardiography, the system uses advanced AI algorithms to analyse biomarkers and provide timely alerts for any deviations, reducing the risk of health emergencies and enabling timely medical intervention.

The technology is US FDA-cleared and adheres to international standards for data privacy. Health data can be accessed via a user-friendly mobile app, ensuring that NRIs stay connected to their parents' health 24/7, regardless of distance.
