

Medtronic and Philips partner to upskill 300+ clinicians in Structural Heart Imaging in India

27 February 2025 | News

Training programme will combine didactic sessions with hands-on experience

Medtronic, a leader in medical technology, and Philips, a leader in health technology, have announced the signing of a Memorandum of Understanding (MoU) in India, to educate and train cardiologists and radiologists on advanced imaging techniques for structural heart diseases.

This partnership aims to upskill 300+ clinicians in multi-modality imaging such as echocardiography (echo) and Magnetic Resonance Imaging (MRI), especially for End-Stage Renal Disease (ESRD) patients.

The training programme will combine didactic sessions with hands-on experience delivered on Philips' cutting-edge ultrasound and MRI systems, under the guidance of renowned international and Indian experts. 15 key medical institutions have been identified specialising in structural heart procedures for these educational workshops.

Speaking on the collaboration Mandeep Singh Kumar, Managing Director and Vice President of Medtronic India said, "This collaboration represents a significant step forward in our ongoing commitment to improving patient outcomes, particularly for those with chronic kidney disease and ESRD. By providing specialised training and advanced imaging solutions, we aim to equip healthcare professionals with the tools they need to enhance the precision of TAVI (Transcatheter Aortic Valve Implantation) procedures and ultimately improve patient care."

"At Philips, every effort we make is centered on providing better care for more people and this partnership with Medtronic is another step towards our goal. By focusing on innovation and education in structural heart imaging across India, we aim to address the rapid advancements in multi-modality imaging through continuous learning. Our objective is to empower clinicians with advanced techniques such as echocardiography and MRI, leading to more accurate diagnoses and improved care outcomes, especially for ESRD patients", said Bharath Sesha, Managing Director, Philips Indian Subcontinent.
