RED Health opens global centre of excellence in allied healthcare education

11 March 2025 | News

To set new benchmarks in emergency medicine and pre-hospital care training

Marking a bold step toward reshaping allied healthcare education, Hyderabad-based startup RED Health, Asia's only JCI-accredited and India's largest emergency medical care company, has introduced its dedicated education and training arm, RedVersity.

This initiative is set to redefine emergency medicine and pre-hospital care training by equipping professionals with advanced skills and industry-leading expertise, addressing critical gaps in the healthcare sector.

As the demand for skilled healthcare professionals continues to rise, RedVersity aims to empower aspiring medical professionals, working clinicians, and corporate partners through a diverse range of globally accredited programmes.

These programmes, delivered through the recently acquired RED TACT Academy for Clinical Training, will provide internationally recognized certifications such as Basic Life Support (BLS), Advanced Cardiac Life Support (ACLS), and Pediatric Advanced Life Support (PALS) from the American Heart Association (AHA) as well as Advanced Trauma Life Support (ATLS) from the American College of Surgeons (ACS).

In addition to short-duration certifications, RedVersity will offer medium-duration industry readiness programs, including EmergePro, a specialized finishing school designed to prepare undergraduate and postgraduate students for careers in emergency medical services and allied healthcare.

The training portfolio will also include long-term academic collaborations with leading universities and institutions in India, integrating clinical exposure with academic excellence. Large-scale industrial safety programmes will further enhance workplace emergency preparedness, while a dedicated global workforce mobility initiative will open international career opportunities for healthcare professionals.
