AIC T-Hub launches 5th cohort of healthcare programme to nurture startups

04 April 2025 | News

To onboard one or two international startups to introduce them to Indiaâ??s healthcare ecosystem

Hyderabad-based T-Hub, one of the world's leading startup incubators, in collaboration with Atal Innovation Mission (AIM) has announced the launch of the 5th cohort of AIC T-Hub Healthcare Programme. The programme has selected 20 promising startups from a competitive pool of over 209 applications.

This three-month hybrid programme is designed to accelerate innovation in medtech, digital health, and healthcare accessibility by providing startups with mentorship, market access, investor engagement, and regulatory guidance.

Among the selected startups are Artyem Care, Bioscafil, Chqup, Cloud Palliative Care, Dag2IL, Epirelief, Dr. DICOM (GLOCAL DIGITAL), Kashi Medicos, Nahush Pharma, Oui Medical, Planytics, Reyansh Technologies, Sigma Mozak, Signel Biomedical, Skinska, Tap Health, thebabyland, TurocratesAI, 365Veda, and Warkas.

These startups were selected based on their proof-of-concept readiness, technological innovation, regulatory compliance preparedness, market potential, and the strength of their founding teams.

Throughout the programme, they will benefit from one-on-one mentorship with industry veterans, strategic introductions to hospitals and corporates, and exclusive investor networking opportunities to help secure funding and business collaborations. Through this programme, startups will gain access to leading hospitals and healthcare institutions for real-world validation and pilot studies, ensuring their solutions are market-ready and clinically viable. They will also receive expert guidance on navigating domestic and international healthcare regulations, which is critical for scaling in a highly regulated industry.

Additionally, by engaging with venture capitalists, healthcare firms, and policymakers, startups will have opportunities to forge strategic partnerships and secure funding. Market access will be a key focus, with curated introductions to hospitals, corporates, and healthcare organizations that can facilitate growth and adoption of innovative solutions.

The programme also aims to onboard one or two international startups to introduce them to India's healthcare ecosystem, fostering cross-border innovation. Additionally, AIC T-Hub is building a robust network of doctors, hospitals, and sector-focused investors to support startup success. The programme will conclude with a Demo Day & Investor Connect in June 2025, where participating startups will present their solutions to industry leaders and potential investors.
