Symposium on GM technology

Gene Campaign is organizing a symposium on "The Relevance of GM Technology to Indian Agriculture and Food Security" on 26-27 November 2003, at the India Habitat Center, New Delhi.

The aim is to raise awareness about the various aspects of GM technology and assess their relevance and applicability to Indian conditions. The discussions will examine the role of GM technology in increasing food production and the role of alternative strategies, the socio-economic impact of this technology and the ability of India and other developing countries to implement GM technology in a safe and responsible manner

RNA in Drug Development conference

The Knowledge Foundation Inc. is organizing the 3rd annual conference on RNA in Drug Development from 10-11 November at San Diego, CA.

The conference will address the latest challenges within RNA stability, RNA delivery, designing functional siRNA's and discovering new opportunities for using RNA as a target. This symposium will provide a competitive insight into the current state of RNA research and development by bringing together leading researchers focusing on areas like RNA intereference, ribozymes, aptamers, antisense technology, alternative splicing and targets for antibiotic therapies.

Chicken Genome Sequence: Impact and Applications symposium

The University of Georgia, in association with AviGenics Inc., is organizing a two-day symposium on the science and benefits of chicken genome sequencing entitled "Chicken Genome Sequence: Impact and Applications". The symposium will be held on 13-14 November at the Omni Hotel, CNN Center, Atlanta, GA. It will offer an opportunity to review recent developments in avian genetics and transgenic technologies as well as the impact of avian genome sequencing efforts in diverse fields including the biopharmaceutical industry, poultry industry and food safety.

Antibody Engineering conference

IBC is organizing the 14th annual international Antibody Engineering conference at the Paradise Point Resort, San Diego, CA from 30 November and 1 December.

The conference will offer the latest discoveries from basic research to early-stage clinical and how these advances will lead to promising therapeutics. It provides an opportunity to learn the latest in antibody basic science, technology and therapeutic applications. This event is co-located and concurrent with IBC's "Antibody Therapeutics from Clinical Development to Business Strategies" event.
