MeshApp develops digital platform to modernise doctorâ??pharma interactions

21 May 2025 | News

Offering a one-stop solution to meet the evolving needs and holistically support doctors

In a significant step towards bridging gaps between the medical and pharmaceutical communities, MeshApp has launched a powerful digital platform that reimagines how doctors and pharma representatives engage, collaborate, and grow.

Tailored specifically for India's healthcare professionals, MeshApp offers a suite of features that not only simplify daily workflows but also foster community, learning, and legal security.

With a fast-growing network of verified professionals, MeshApp is more than just a communication tool, it's a comprehensive ecosystem for doctors that brings together meaningful conversations, financial security, passive income opportunities, and peace of mind through medico-legal support.

One of the most valuable features of MeshApp is instant access to medico-legal assistance, available nationwide, and the first 15 minutes of consultation are absolutely free from topmost legal firms across india . In a landscape where doctors are increasingly vulnerable to legal scrutiny, this feature provides a crucial layer of protection and peace of mind. With rising litigations in clinical practice—over 1,000+ medical negligence cases filed in 2023 alone (NCRB data)—MeshApp offers nationwide legal assistance with top-tier law firms, including 15 minutes of free consultation per case.

To reduce the administrative burden on doctors, MeshApp is developing tools that will automate essential functions such as accounting, documentation, and appointment management. These features will help free up doctors' time, allowing them to focus more on patient care and less on paperwork.
