

Stryker launches advanced ICU air mattress APAISER X1 designed for Indian market

09 June 2025 | News

APAISER X1 integrates seamlessly with Stryker's SmartMedic to enhance patient comfort and caregiver efficiency

Stryker, one of the world's leading medical technology companies, has announced the launch of its advanced ICU air mattress, APAISER X1, at ANEICON 2025, the annual conference of the Association of Nurse Executives (ANEI) India, held in Kochi.

Tailored specifically for the Indian market, the APAISER X1 seamlessly integrates with Stryker's SmartMedic platform; and is designed to enhance patient comfort, reduce the risk of pressure injuries and improve caregiver efficiency in critical care settings.

Key features include independent low-air loss technology, a 3-in-1 TrueCare alternating pressure system, and three customizable care modes: Alternate, Static, and Constant Low Pressure. Other notable features include auto fowler detection, a quiet pump for noise-sensitive environments, and a transportation cap that preserves mattress pressure for extended periods without power, ensuring continuity of care during patient transfers or power outages.

Arvind Srinivas, Business Unit Director, Medical, said, "The increasing need for better patient outcomes and stronger caregiver support demands innovations that combine advanced technology with solutions tailored to local challenges. APAISER X1 is a proud 'Customised for India' innovation, crafted to enhance patient comfort and assist nurses in critical care. We look forward to collaborating with healthcare professionals to elevate ICU care across the country."

With the launch of APAISER X1, Stryker reinforces its focus on developing meaningful innovations that address unmet clinical needs and empower caregivers with technology-driven solutions.
