Waters enhances Alliance iS HPLC System software

18 June 2025 | News

Setting a new standard for end-to-end traceability and data integrity

Waters Corporation has announced the release of version 2.0 of the Alliance iS HPLC System software, a significant advancement that provides full end-to-end traceability and enhanced data security for the industry pharmaceutical.

The integration of Empower Software's secure architecture with the Alliance iS HPLC system's touchscreen will improve compliance monitoring and intuitive traceability for customers. Globally, more than 80% of new medicines have been submitted to regulatory authorities using Empower software.

With this release, the Alliance iS HPLC system offers state-of-the-art touchscreen security by enabling individual, identifiable access control through user authentication. This innovation further strengthens the system's position as the smartest HPLC system available today, setting a new benchmark for traceability while improving troubleshooting and operational efficiency. It ensures uncompromised data integrity from sample to result.

This integration further enhances the simplicity of the Alliance iS HPLC System, which reduces human error by up to 40% and improves QA/QC laboratory productivity with the system's innovative intelligence that handles errors before they occur.
