

Laxmi Dental to acquire majority stake in AI Dent to expand AI capabilities in digital dentistry

01 August 2025 | News

To accelerate integration of AI in dental imaging and diagnostics

Mumbai-based Laxmi Dental, a dental products company, has announced that its Board of Directors has approved an investment in IDBG AI Dent Global, a Gujarat-based healthcare technology company focused on artificial intelligence applications in dentistry.

Upon completion, Laxmi Dental Limited will hold 58% of the capital in AI Dent. The objective of the acquisition is to strengthen the company's research and development and expand its technology offerings. The move also supports India's efforts to promote domestic manufacturing and self-reliance under the Make in India and Aatmanirbhar Bharat initiatives.

AI is becoming a foundational technology in dentistry across the world. From diagnostics to treatment planning, AI tools are improving decision-making and clinical outcomes.

Through this investment, Laxmi Dental aims to build local capability in AI for dental care, enabling dentists to adopt faster, data-driven processes while reducing procedural complexity for patients. The focus is on creating systems that support dentists in delivering consistent care and give patients improved access, accuracy, and clarity in diagnosis and treatment.

AI Dent is developing AI-based dental imaging and diagnostic tools, including software for image analysis and X-ray interpretation.
