Agilent expands Dako Omnis Family with three new models to meet evolving pathology lab needs

05 August 2025 | News

Transitions beyond a one-size-fits-all model to offer a tailored portfolio

Agilent Technologies Inc. has announced the introduction of its Dako Omnis family of instruments with three new models- **Agilent Dako Omnis 110, 165, and 165 Duo-** designed to meet the evolving needs of pathology laboratories of all sizes.

These new instruments provide labs with the flexibility to tailor their staining solutions according to volume, workflow, and diagnostic requirements.

With the launch of the Agilent Dako Omnis family, Agilent transitions beyond a one-size-fits-all model to offer a tailored portfolio, empowering labs to select the configuration that best meets their needs.

Scalable Solutions for Every Lab—From Routine to Revolutionary.

- **Dako Omnis 110**: Built for precision in low-medium volume labs, delivering up to 110 IHC slides per day with dependable performance.
- **Dako Omnis 165**: Engineered for efficiency in medium-high volume labs, delivering up to 165 IHC slides per day with seamless consistency.
- **Dako Omnis 165 Duo**: Designed for ultimate flexibility in medium-high volume labs, delivering simultaneous IHC and ISH with maximum throughput and confidence.

Building on the success of the original Dako Omnis, all models feature continuous, case-based processing and shared reagents, enabling labs to streamline workflows and reduce turnaround times. A newly integrated direct connection for de-ionised water and non-hazardous waste further reduces handling time.
