

Primelaze introduces German Q-Switched Nd:YAG Technology for skin treatment

06 August 2025 | News

Enhancing treatment efficacy and safety for dermatological applications

Puducherry-based startup Primelaze collaborates with German dermatological laser pioneer Hypertech Laser Systems (HLS), introduces revolutionary BiAxis QS (Nano) & BiAxis Pico - Q-Switched Nd:YAG technology, a groundbreaking advancement in the field of aesthetic and medical dermatology.

This state-of-the-art laser system boasts novel features aimed at enhancing treatment efficacy and safety for dermatological applications.

Q-Switched Nd:YAG Technology is designed to cater to all skin types and allows for a comprehensive range of treatments. From addressing a variety of dermal and epidermal pigmentation lesions to the effective removal of multi-coloured tattoos, this system provides versatility like never before.

Dr Anurag Tiwari, a renowned dermatologist and laser expert, expressed his enthusiasm for this innovative technology, stating, "The introduction of the BiAxis QS (Nano) into our practices represents a significant leap forward in our ability to provide effective and safe treatments for our patients. This advanced laser system not only enhances treatment outcomes but also ensures a comfortable experience for clients."

Renowned German expert Dr Fedor Mayorov, PhD, who brings over 30 years of experience in medical laser systems development, emphasised the importance of high-performance technology stating, "The precision and efficacy of this laser system position it as a leader in the global market. Its adoption by dermatologists and plastic surgeons in over 50 countries is a testament to its success in delivering outstanding clinical results."
