ZS strengthens India operations with expansion in Hyderabad

12 August 2025 | News

Part of its strategy to increase innovation and service capabilities for healthcare and life sciences GCCs in India

ZS, a global management consulting and technology firm, has announced the opening of its new Hyderabad office, an approximately 50,000 sq ft facility that will house 550-600 people.

This move is part of ZS's broader strategy and commitment to delivering greater capacity and end-to-end global capability center (GCC) offerings to clients. The centre will continue to offer a range of flexible engagement models, including packaged offerings built for GCCs, embedded functional expertise and fully managed GCC-as-a-service models.

Hyderabad has solidified its position as one of India's fastest-growing GCC hubs, especially in healthcare and life sciences. Its thriving talent base and technology ecosystem gives ZS access to quality talent highly specialized in business and tech operations, analytics and data engineering to support GCC operations and their evolving needs. This new location will better position ZS to deliver customised, differentiated, high-impact solutions for global GCC partners throughout their operations life cycle.

Mohit Sood, regional managing principal, ZS said, "GCCs are evolving from execution hubs to innovation and tech centers, and ZS is well positioned to support this industrywide transformation. We partner with GCCs to establish a strong foundation, scaled operations and future-proofed capabilities for long-term, enterprise-wide impact. The new office is a testament to ZS's unique value, innovation and end-to-end service offerings to GCC clients. All of these factors have led to our strategic expansion within a year of our presence in Hyderabad. This move underscores our growth and commitment to building strong and long-term client partnerships, tapping into local talent and contributing to the GCC ecosystem.

With more than 40 years of deep industry experience and strong expertise in data and AI, ZS has a competitive edge in the healthcare and life sciences.
