CellStrat announces launch of new AI solution for doctors

20 August 2025 | News

Democratising healthcare access for India's 700+ million non-English speaking population

CellStrat, a startup based in India and US, has announced the launch of AIâ?¯Triage Solution, a revolutionary app which uses artificial intelligence (AI) to streamline the entire process from assessing, diagnosing to offering treatment options.

It interprets the symptoms in the users' own words and offers clinically guided and safe treatment recommendations. It evaluates and prioritises patient needs and is very useful especially in case of emergencies as well as primary care. The best thing is that it can support patients before their visit with fast symptom analysis and personalised medical solutions to symptoms.

It supports multiple international and 22 Indian regional languages with real-time voice processing and sentiment analysis.

AI Triage Solutions can help make the lives of both patients and doctors easier. It makes the entire process of doctor consultation to treatment to follow-ups much easier and faster.

AI Triage Solutions can be a boon for many players in the healthcare sector- Small and Large Clinics; Diagnostic labs; Hospitals; Insurance Companies; Physiotherapy/Chiropractors Centres; Pharmacies, to name a few.

AI triage solutions is revolutionising how patients are assessed and treated. This uses artificial intelligence, powered by machine learning and natural language processing (NLP), to analyse patient symptoms, medical history, and other data to prioritise urgency and recommend treatments.
