Cohere Health announces launch of Global Capability Centre in Hyderabad

26 February 2026 | News

New centre strengthens the companyâ??s global scale and advancements in AI-driven clinical intelligence

US-based startup Cohere Health®, a leader in clinical intelligence solutions for health plans, has announced the launch of its Global Capability Centre (GCC) in Hyderabad, India. As the company continues to expand its operational capabilities globally, this milestone reinforces its commitment to scaling innovation, technological excellence, and advancing its clinically trained AI platform.

As part of its long-term vision and investment in globally distributed teams, Cohere Health is scaling the GCC into a centre of excellence that fosters a culture of innovation and collaboration, deepens clinical intelligence, and improves outcomes for health plans, clinicians, and patients worldwide. India is a cornerstone of the company's global operating model and a key driver of its mission to ensure patients everywhere receive the right care as quickly and safely as possible.

Tapping into India's deep talent pool, the Hyderabad GCC brings together expert engineering, analytics, and clinical operations teams to strengthen Cohere Health's global capabilities and accelerate product advancements. Working closely with US-based colleagues, the centre expands the company's capacity to scale clinically trained AI and deliver more connected solutions that improve payer-provider collaboration.

Looking ahead, Cohere Health plans to continue expanding the Hyderabad GCC with strategic hiring across engineering, product, data science, and compliance, strengthening its global teams and capacity. This expansion positions Cohere Health to meet the increased demand for clinically trained AI solutions that streamline complex processes, improve health outcomes, and enhance payer-provider collaboration across the healthcare continuum–reinforcing its role as the leader in enterprise clinical intelligence for health plans.
