US-based medtech firm Align Technology to open multi-million dollar manufacturing facility in Hyderabad

25 May 2026 | News

Expected to create more than 300 new jobs over the next several years

US-based Align Technology, Inc, a leading global medical device company that designs, manufactures, and sells the Invisalign® System of clear aligners, iTero™ intraoral scanners and services, and exocad™ CAD/CAM software for digital orthodontics and restorative dentistry, has announced plans to open a new manufacturing facility in Hyderabad, in 2027, create more than 300 direct jobs, and spend approximately \$200 million in both capital and operational expense over the next several years.

This new facility reflects Align's strategy to get closer to customers and scale its operations to support high-growth markets like India, while strengthening its supply chain resilience and operational efficiency to drive shareholder value.

Align's Hyderabad manufacturing facility will complement Align's existing footprint in Hyderabad, which includes its Global Capability Centre, the Align Innovation Centre, further reinforcing the city's strategic importance within Align's global operations network. It would mark the company's first manufacturing presence in India and its fourth globally. The proposed facility is expected to commence operations in 2027 and be margin accretive in the first year.
