Ojas Maxivision Eye Hospital expands further in Mumbai with new centre

09 June 2026 | News

Western India continues to be a key growth zone for Maxivision

Ojas Maxivision Super Speciality Eye Hospitals has further strengthened their presence in Mumbai with the launch of the new centre in Juhu, while becoming one of the first eye care networks in the city to offer a comprehensive suite of next-generation vision correction and cataract technologies.

As part of this expansion, the hospital has introduced the combination of ELITA SILK and WaveLight® Plus InnovEyes for the first time in Mumbai both under one brand (Bandra Centre), further reinforcing its position as a Centre of Refractive Excellence.

WaveLight® Plus InnovEyes represents the next generation of personalised laser vision correction. The platform uses advanced artificial intelligence to create a highly detailed 3D digital twin of the patient's eye and virtually simulate treatment outcomes before surgery.

The expansion further strengthens the collaboration between Ojas Eye Hospital and Maxivision Super Speciality Eye Hospitals, with Ojas Maxivision aiming to expand its network from 3 centres currently to 30 centres by FY31, serving over 3 lakh patients annually. By offering both technologies within a single Centre of Refractive Excellence, Ojas Maxivision enables surgeons to recommend the technology that is truly best suited to the individual patient, reinforcing the hospital's commitment to personalised eye care.

Dr G. S. K. Velu, Chairman and Managing Director, Maxivision Super Speciality Eye Hospitals, mentioned, “Mumbai represents one of the most important growth markets for us in Western India. We are also planning to add three more centres in Mumbai in near future to make our hold stronger in the market.”

Western India continues to be a key growth zone for Maxivision, contributing approximately 30-35% to overall revenues, with Mumbai accounting for nearly 30-35% of the West zone business. The network is targeting 20-25% CAGR growth across the West over the next five years.
