ADMI and Cliniminds partner to accelerate diagnostic manufacturing capabilities and workforce readiness

16 June 2026 | News

For bridging the industry talent gap and fortifying the self-reliance of India's diagnostic manufacturing ecosystem

The Association of Diagnostics Manufacturers of India (ADMI) has announced the signing of a Memorandum of Understanding (MoU) with Cliniminds, a premier health sciences training and educational institute. This strategic alliance is designed to address the core manufacturing, regulatory, and talent acquisition challenges faced by India's diagnostic startups and SMEs.

Central to the MoU is the creation of a specialised manufacturing workforce pipeline. By aligning curriculum with industry needs—specifically in cleanroom operations, quality assurance, and molecular diagnostic assembly—the initiative will provide manufacturers with a pre-trained talent pool, significantly reducing onboarding time and recruitment costs.

Key strategic benefits by this include:

Regulatory Compliance Upskilling: Specialised certification programmes to help technical teams navigate complex regulations, thereby reducing product approval timelines.

Exclusive Corporate Training Discounts: Preferential pricing on Cliniminds' certification programmes, offering an immediate financial return on ADMI membership by lowering internal training budgets.

Industry-Integrated Internships: A formal framework deploying Cliniminds students onto live operational and market research projects, granting manufacturers cost-effective manpower.

Domestic Procurement Intelligence: Real-time, localised insights into Public Procurement guidelines, GeM updates, and local content criteria to help members successfully secure government tenders.
