Garware Fulflex completes acquisition of medical products manufacturing facility in US

06 July 2026 | News

The Jacksonville facility manufactures a broad range of critical medical products

Pune-based Garware Fulflex has announced the successful completion of its acquisition of a 300,000-square-foot, fully automated medical products manufacturing facility in Jacksonville, Texas, marking a major milestone in the company's global healthcare growth strategy and significantly expanding its manufacturing footprint in North America.

Situated on a 30-acre campus, the Jacksonville facility employs more than 250 people and manufactures a broad range of critical medical products used by healthcare providers and patients across North America and around the world.

The highly automated facility features advanced injection molding, blow molding, thermoforming, extrusion, assembly, and quality systems, further strengthening Garware Fulflex's ability to serve leading global healthcare companies with world-class manufacturing capabilities.

The acquisition significantly enhances the company's manufacturing presence in the United States and reinforces its long-term strategy of building a leading global healthcare manufacturing platform.
