BPL Medical Technologies strengthens respiratory diagnostics portfolio with Jaeger Medical

20 July 2026 | News

A strategic expansion of BPL MedTech's respiratory diagnostics portfolio

Bengaluru-based BPL Medical Technologies has announced its appointment as the authorised sales and service partner for Jaeger Medical's respiratory diagnostics portfolio in India.

The appointment represents a strategic expansion of BPL MedTech's respiratory diagnostics portfolio, enabling hospitals and healthcare providers across the country to access globally trusted pulmonary diagnostics solutions supported by BPL's robust nationwide sales and service network.

As respiratory diseases continue to place a growing burden on India's healthcare system, the need for accurate and timely diagnosis has become increasingly important. Through this collaboration, BPL Medical Technologies will offer Jaeger Medical's comprehensive portfolio of respiratory diagnostics solutions, including spirometry, pulmonary function testing (PFT) and cardiopulmonary exercise testing (CPET), supporting clinicians in the diagnosis, assessment and monitoring of a wide range of respiratory conditions.

Germany-based Jaeger Medical's solutions are already used by leading healthcare institutions across India, including Apollo Hospitals, Manipal Hospitals, AIIMS and JIPMER. With BPL Medical Technologies now providing nationwide sales, installation, application support and after-sales service, hospitals can expect faster response times, dependable technical expertise and enhanced customer support throughout the product lifecycle.

Together, Jaeger Medical's internationally trusted respiratory diagnostics portfolio and BPL Medical's pan-India reach will strengthen respiratory diagnostics capabilities across hospitals and diagnostic centres nationwide.
