Glenmark expands global respiratory innovation footprint with RYALTRISÂ® launch in Brazil

11 September 2026 | News

Launch introduces Glenmarkâ??s differentiated dual-action therapy for allergic rhinitis in Brazil

Glenmark Specialty S.A., a wholly-owned subsidiary of Mumbai-based Glenmark Pharmaceuticals, has announced the launch of RYALTRIS® Nasal Spray in Brazil for the treatment of moderate to severe symptoms associated with allergic rhinitis (AR) in adults and adolescents of 12 years of age and older.

The launch follows regulatory approval granted by the Brazilian Health Regulatory Agency, Agência Nacional de Vigilância Sanitária (ANVISA) earlier this year.

Allergic rhinitis is a highly prevalent chronic condition in Brazil, affecting an estimated 20–30% of the population, equivalent to nearly 40–60 million people2,3. This significant disease burden highlights the need for effective, convenient, and differentiated treatment options for patients across the country.

The launch of RYALTRIS® introduces the first olopatadine-containing intranasal combination therapy in Brazil, combining an antihistamine (olopatadine hydrochloride) and a corticosteroid (mometasone furoate) in a single nasal spray. This offers a differentiated dual-action treatment option for symptoms associated with allergic rhinitis.

RYALTRIS® is Glenmark's first globally commercialised branded innovative product and has already been approved in 57 markets worldwide, including the United States, European Union, United Kingdom, Australia, South Korea, Russia, and China.
