Gabify: Bringing AI to Early Neurodevelopmental Care

27 October 2026 | Features

Gabify is building an AI-powered ecosystem to make early screening and therapy support more accessible for children with neurodevelopmental and speech-related needs. Founded in 2023, the Noida-based health-tech startup combines voice and visual AI with clinical oversight to help identify developmental concerns earlier and connect families with therapists, clinics and other care providers.

GABIFY™

Problem

Children with autism, ADHD and speech delays may face long waits for assessment, limited access to specialists and fragmented therapy support. Gabify aims to address these gaps through faster screening, digital care coordination and more accessible pathways to professional support.

Product

Gabify's Neurolens uses voice and visual AI to analyse speech patterns, facial expressions, eye gaze and behavioural markers across more than 189 criteria. Its wider platform combines clinical practice management, therapist connectivity and parent-facing care tools, with human clinical review supporting AI-generated outputs.

Proof

Gabify has reported pilot deployments across more than 35 preschools and daycare centres, with adoption extending to schools, hospitals and clinics. Its website lists more than 2,500 AI-assisted screenings, 50-plus clinics and institutions, and 300-plus clinicians across 12-plus operational locations.

People

Gabify was co-founded by Sahil Chopra, Prachi Sood and Vasyl Leshchuk. The team combines startup leadership, speech therapy expertise and technology development to build solutions for children's neurodevelopmental screening and care.

Purse

In April 2026, Gabify raised $175,000 in pre-seed funding, led by Inflection Point Ventures (IPV). It also received a â?¹25 lakh grant under the NIDHI Seed Support Scheme through GHRTBI to support clinical validation, technology development and team expansion.

Plan

Gabify plans to expand through business-to-business, direct-to-consumer and CSR-led initiatives, reaching more families through schools, clinics and healthcare institutions. Its stated ambition is to positively impact one million children by 2028 while strengthening clinical validation and its AI-powered care ecosystem.

Why it matters:

By combining AI-assisted screening with professional oversight and digital therapy coordination, Gabify is addressing gaps in early neurodevelopmental care. Its approach could help families access timely assessments and appropriate support, particularly in underserved communities.

FAST FACTS

Category	Details
Company	Gabify (Sahchi Hearing and Speech Solutions Pvt. Ltd.)
Founded	2023
Headquarters	Noida, Uttar Pradesh
Industry	HealthTech, AI diagnostics, neurodevelopmental care
Founders	Sahil Chopra, Prachi Sood and Vasyl Leshchuk

Core offering	AI-assisted screening and digital therapy management
Flagship product	Neurolens
Technology	Voice and visual AI with human clinical review
Latest funding	$175,000 pre-seed, April 2026
Lead investor	Inflection Point Ventures
Additional support	â?¹25 lakh NIDHI Seed Support Scheme grant
Next	Strengthen clinical validation and expand access, targeting one million children by 2028
