# MediElaj: Bringing AI-Powered Preventive Healthcare Closer to Communities

02 November 2026 | Features

**Healthcare often becomes a priority only when symptoms appear, but MediElaj wants to change that approach through accessible, technology-enabled health screening. Developed by MedPredict Private Limited, the platform combines AI-powered health assessments, smart diagnostic kiosks and a mobile application to help individuals monitor health indicators, understand symptoms and maintain digital health records. Its focus is on taking preventive healthcare beyond hospitals and making basic health insights more accessible across urban, semi-urban and rural communities.**

**Problem**

Access to preventive screening and timely medical guidance remains uneven, particularly in smaller towns and underserved communities. Patients may also struggle with fragmented health records and limited access to preliminary health assessments. MediElaj aims to address these gaps through connected screening devices, digital health tools and AI-assisted health information.

**Product**

MediElaj integrates a smart health kiosk with a mobile application offering more than 50 health tests and non-invasive screening features. Its platform includes AI-assisted face scanning, symptom assessment, MediDOC AI, digital health records, medicine reminders and instant health reports. The ecosystem is designed to support preliminary health assessments and wellness monitoring rather than replace professional medical diagnosis.

**Proof**

The company's website reports more than 104,000 patients, 50-plus specialists and over five years of experience. Its technology offering includes health kiosks, mobile-based health monitoring and AI-assisted screening. The company also lists ISO 13485:2016 and ISO 14971:2019 certifications on its website. These operational figures and credentials should be reconfirmed directly with the company before publication.

**People**

MediElaj is led by Founder and Chairman Debjit Patra, an entrepreneur with over 35 years of experience in global finance, strategy and management information systems. Umesh Khatri serves as Director, Co-founder and CEO, bringing over 12 years of industry experience across technology and business operations.

**Purse**

MediElaj's official website does not currently disclose its total funding, funding rounds or investor details. The company has identified technology development, healthcare device integration and expansion of its AI-powered healthcare ecosystem as key areas of focus.

**Plan**

MediElaj aims to expand its smart health kiosk and mobile application network across urban, semi-urban and rural markets. It is also looking to build partnerships with hospitals, pharmacies, clinics and diagnostic laboratories while strengthening its AI capabilities, medical-device integration and digital health infrastructure.

**Why it matters:**

MediElaj is exploring how AI, connected medical devices and digital health records can make preventive healthcare more accessible. Its integrated kiosk-and-app model offers an opportunity to extend preliminary health screening and wellness

monitoring beyond conventional healthcare facilities, particularly in underserved communities.

**FAST FACTS**

| Category | Details |
