ZenMD: Building a Trusted AI Intelligence Layer for Indian Healthcare

06 November 2026 | Features

Doctors make hundreds of clinical decisions every day, often while managing heavy patient loads, complex medical information and extensive documentation. ZenMD is developing an integrated clinical AI platform designed to support doctors, medical students and healthcare institutions with evidence-based information, automated documentation and diagnostic assistance. Founded by Rithika Reddy and Pranav Reddy, the company aims to make reliable clinical intelligence part of everyday medical practice while keeping healthcare professionals at the centre of decision-making.

Problem

Healthcare professionals often rely on fragmented tools for clinical references, patient documentation, drug information and diagnostic interpretation. Generic AI platforms can also produce inaccurate or unsupported medical responses. ZenMD aims to address these challenges through a specialised clinical AI system with evidence validation and healthcare-focused workflows.

Product

ZenMD offers four integrated products: ZenScribe for voice-based clinical documentation, ZenNotes for automated medical notes, ZenConsult for clinical decision support and ZenScan for medical imaging analysis. Its platform supports more than 80 medical specialties and includes drug information, laboratory interpretation, clinical research summaries and multilingual capabilities.

Proof

Within eight weeks of its public launch in India in May 2026, ZenMD reported more than 60,000 users and 90,000 page views. Its subsequent company disclosures reported over 26,000 unique clinicians and healthcare professionals, nearly 120,000 sessions and more than 39,000 clinical queries over a 90-day period. The platform also reports a proprietary hallucination-correction layer designed to verify AI-generated responses before they reach clinicians.

People

ZenMD was founded by Rithika Reddy, Founder and CEO, and Pranav Reddy, Co-founder and Chief Marketing Officer. The founding team is focused on developing clinical AI infrastructure tailored to Indian healthcare requirements, with an emphasis on accuracy, accessibility and clinician trust.

Purse

ZenMD has not publicly disclosed a confirmed institutional funding round or total capital raised through its official website. The company has focused on building its clinical AI platform, strengthening product capabilities and expanding adoption among healthcare professionals and institutions.

Plan

ZenMD aims to deepen its presence across hospitals, medical colleges and healthcare institutions while expanding its clinical AI capabilities. Its priorities include improving clinical workflow automation, strengthening diagnostic support, expanding specialty-specific intelligence and developing institutional AI governance and deployment solutions.

Why it matters:

ZenMD is addressing an important challenge in healthcare AI: making artificial intelligence reliable enough for everyday clinical workflows. By combining documentation, decision support and diagnostic intelligence within one platform, it aims to reduce administrative workloads and help clinicians access relevant medical information faster.

FAST FACTS

Category	Details
Company	ZenMD
Founded	2025
Founders	Rithika Reddy and Pranav Reddy
Industry	HealthTech, Clinical AI, Digital Health
Core offering	AI-powered clinical intelligence
Key products	ZenScribe, ZenNotes, ZenConsult and ZenScan
Specialties supported	80+
Key capabilities	Clinical documentation, decision support, drug information and imaging analysis
Technology	AI-powered clinical intelligence and hallucination correction
Latest funding	No confirmed institutional funding publicly disclosed
Early traction	60,000+ users within eight weeks of India launch, as reported in June 2026
Next	Expand hospital deployments, medical college partnerships and clinical AI capabilities
