C-CAMP and Imperial College London announce Indegene as first industry partner of Indo-UK Life Science Corridor

19 November 2026 | News

Indegene will help define industry challenges and support startup exchanges

Bengaluru-based Centre for Cellular and Molecular Platforms (C-CAMP), in partnership with Imperial College London, welcomed Indegene as the first industry partner of the Indo-UK Life Science Corridor.

Supported through the Imperial Global India initiative, the Corridor connects world-class research in India and the UK with entrepreneurship, industry expertise, and pathways to translation. It is designed to enable formal, two-way sharing of knowledge and evidence on priority challenges, innovation readiness, and ecosystem needs. Indegene, C-CAMP, and Imperial College London will co-develop entrepreneurship programmes and support the exchange of knowledge and talent between the two countries.

Indegene is the AI-native operating partner for modern life sciences, bringing deep industry context to the Corridor, and a track record of working with the world's top 20 biopharma companies.

As part of the collaboration, Indegene will help define industry challenges and support startup exchanges and ecosystem immersion programs. Initial focus areas include antimicrobial resistance, diagnostics, digital health, agritech, brain science, and mental health.

The three organisations made the announcement at the C-CAMP–Imperial joint Roundtable on International Partnerships for AI Discovery and Innovation, convened under the Government of Karnataka's Global Innovation Alliance initiative as part of the Bengaluru Tech Summit 2026.
