New device for rapid semi dry transfer

Fisher Scientific launches new Thermo Scientific Pierce G2 fast Blotter, designed especially for rapid 5 minute or traditional 1 hour. The new device is efficient for small, medium and large proteins. The new product has been designed in such a way that it has integrated power supply for seamless control and easy touch programming for any protocol. With the help of this product easily transfer upto 4 mini gels or 2 midi gels at a go can be done.
