

## Indian biotechs line up for Malaysia

04 November 2010 | News

Even as India is emerging a hot destination in Asia for doing contact research and manufacturing, clinical research, and discovery services, Indian companies are heading to Malaysia in large numbers. They are going to be Asian neighbors for biomanufacturing, drug discovery, stem cell R&D, molecular diagnostics, aquaculture companies like Biocon, Dr Reddy's Labs, Avesthagen, Actis Biologics - are looking at expanding their operations to Malaysia, lured by its attractive offers and advantages

Bangalore-based Biocon, India's leading biotechnology company, on October 27, 2010, announced Strategic Foreign Direct Investment of \$160 million in Malaysia with the Malaysian biotechnology corporation, BiotechCorp. The investment will be made towards establishing a

biomanufacturing and R&D facility in Bio-XCell, a custom-built biotech park and ecosystem in Iskandar Malaysia.

In October 2010, India's premier biotechnology company Biocon announced a strategic foreign direct investment (SFDI) of \$160 million in Malaysia with the Malaysian Biotechnology Corporation (BiotechCorp). The investment is for setting up a biomanufacturing and R&D facility in Bio-XCell, a custom-built biotechnology park and ecosystem in Iskandar, Malaysia.

"Biocon's strategic investment in Malaysia will propel our industry to the next level. It will be a catalyst in our commercialisation efforts, as we enter phase 2 of our National Biotechnology Policy – the Science to Business Phase,â€? said Dato' Iskandar Mizal Mahmood, chairman, Malaysian Bio-XCell& CEO, BiotechCorp.

"This will be the first high-end biosimilar and biopharmaceutical manufacturing and R&D facility in Malaysia. In compliance with US

FDA cGMP standards, it will raise the bar for quality and excellence in the sector and market. Biocon will stimulate growth for the sector and provide commercial opportunities for Malaysian biotechnology's SMEs. We can expect an increased presence of Biocon-affiliated global giants, growing the sector to new heights,� Dato' Iskandar said.

In this backdrop, customized incentives for large investments, access to ASEAN markets through Free Trade Agreements, no restrictions on equity, adoption to ICH & FDA guidelines for manufacturing activities, industry-friendly regulations, and many other factors are drawing Indian companies to invest in Malaysia.

Exchanging the business intent documents to this effect, in the presence of Indian Prime Minister Dr Manmohan Singh and his Malaysian counterpart, Mohd Najib Tun Abdul Razak, Kiran Mazumdar-Shaw, chairman & managing director, Biocon said, "Malaysia is a compelling global destination for biotechnology, backed with world-class infrastructure and attractive tax incentives. Investing in Malaysia provides us with an international location with strategic geographical proximity to India. Biocon is pleased to be an early mover in this emerging opportunity, as we dovetail our research and biomanufacturing operations with those in Malaysia, to gain a global competitive advantage.�

need a compelling global hend biosimilars besides other biopharmaceutical products.

The investment is the largest for Malaysian biotechnology sector, so far. ### manufacturing efficiency"

-Dr Villoo Morawala Patell, founder and CMD, Avesthagen

# mage not found or type unknown for Avesthagen to invest

Avesthagen has been fortunate to work with a contract manufacturing organization (CMO) in Malaysia that has a manufacturing capability of mammalian cell-based biologicals, in conformation with FDA and European c-GMP guidelines The Malaysian facility offers improved manufacturing efficiency The willingness of the Malaysian facility to be flexible and adapt to Avesthagen's needs, has been very helpful. Manufacturing in Malaysia has offered a very important advantage, it is compliant with The International Conference on Harmonisation of Technical Requirements Registration of for Pharmaceuticals for Human Use (ICH) and US Food & Drug Administration (FDA) guidelines, manufacturing activities.

### **Q** Any support Avesthagen has received from the Malaysian government?

The facility being used by Avesthagen, Inno Biologics, is a government facility. Besides that, there is indeed significant support from the government to obtain clearances and other licensing support.

### **Q** What are your future plans for the Malaysian operations?

Avesthagen will initially focus on completion of clinical batches of the first two molecules. With the support extended by Inno Biologics and the Malaysian government, the relationship with Malaysia is sure to be

that of long lasting mutual benefit.

Avesthagen has built a robust pipeline of eight biosimilars — of which four are in an advanced stage of development. The first product for anaemia, AVDESP has already completed preclinicals, and is ready for cGMP manufacturing for conducting clinical trials in India. The second biosimilar for auto-immune disorders, AVENT, will also be produced at the Inno Biologics facility. Inno Biologics has been contracted to produce clinical grade material of Avesthagen's biosimilars, which will be used for human trials.

Vivo Bio Tech, a biotechnology company from Hyderabad, plans to set up a biotechnology laboratory in Malacca, a state in southern Malaysia, that will test medications for cancer and diabetes. Trial medicines will be tested on dogs, primates and other animals. The company says it plans to import beagles from Holland and capture primates from the local area. The facility is an absolution (\$1/44 untillion) joint-venture (JV) between Vivo Biotech, state government-owned Melaka Biotech Holdings and a local company, Vanguard Creative Technologies. Despite stiff resistance from animal rights groups, Malaysia has no laws overseeing the testing on animals, the Malacca State Chief Minister Mr Mohamad Ali Rustam is proud to have the lab in his state.

Mumbai-based Actis Biologics, a biotech venture technology company focusing on life sciences sector, plans to set up a biotech park called Biocity in Melaka, for which it has been allotted 270 acres of land. Biocity would provide buildings and other facilities for biotech companies. It is talking to a few real estate developers and investors to partner with the Biocity, which is at present on hold, due to real estate issues, and after effects of economic slowdown. Actis is planing to set up the first phase of Biocity, at an investment of action of the billion), who house about 25 units in a 270-acre area. In the second phase, involving an investment of another of the billion, it plans to house 40-50 units. The Malaysian government had earlier assured to provide 500 acres adjacent to the first phase.

#### **Eyeing lucrative market**

Malaysia is positioning itself as a cost-competitive country and a regional hub for global biotechnology companies. It is drawing Indian companies — with tax incentives such as 10-year tax holiday, duty exemptions, customized incentives for large investments, access to Association of Southeast Asian Nations (ASEAN) markets through Free Trade Agreements, and no restrictions on equity.

Regulations in Malaysia are flexible and guidelines are evolving. This provides a scope for early movers. The regulatory approvals for stem cell research takes about seven months in Malaysia as against 18 months in India. Besides, Malaysia's membership of ASEAN and Organization of Islamic Conference (OIC) provides scope of marketing products in the member states of these associations.

Malaysian Biotechnology Corporation (BiotechCorp), the lead development agency for the biotechnology industry has been showcasing initiatives mooted by the government, and incentive schemes offered to companies, in different countries including India. By participating in leading bio exhibitions like Bangalore India Bio and road shows in Chennai and Hyderabad, BiotechCorp has succeeded in drawing the attention of Indian companies. While some companies have already made investments, others including India's leading biotech company, Biocon announced strategic foreign direct investment (FDI) in Malaysia.

He further added "Malaysia hopes the Biocon investment will stimulate growth for the sector, and provide commercial opportunities for Malaysian biotechnology's small and medium enterprises (SMEs).
