Jubilant Clinsys launches TrialStat Orbit EDC

Recently TrialStat Orbit is an Electronic Data Capture soluTrialStat, part of Jubliant Clinsys Inc., a subsidiary of Jubliant Life sciences has launched the much anticipated TrialStat eClinical suite.

Nayan Nananvati, CEO of Jubliant Clinsys Inc commented on the launch of TrialStat "TrialStat eClinical suite is an innovative cloud-based platform providing an advance set of features with a strong focus on usability enabling the power to manage your trial efficiently and providing our clients a robust platform for improving data collection and study management."

Ion used by a wide range of pharmaceutical and CRO customers worldwide, being utilised for complex Phase II and III studies. ORBIT was the industry's first EDC platform to allow all aspects of a study to be configured, deployed and managed through a browser interface, enabling customers to start their studies quickly and cost-effectively. Orbit also includes advanced integrated features such as IWR, Imaging, Coding and Electronic Patient Access. It has been successfully deployed in over 350 global Â studies.

TrialStat CTMS is a Clinical Trial Management System designed to be fully integrated with Orbit, allowing for data entered into Orbit to trigger actions in the CTMs, thereby increasing visibility for critical management areas such as patient enrollment, monitoring management, and site payments.

TrialStat Portal is a central data base designed to provide seamless integration with all TrialStat products creating the ultimate study management tool through real-time visualization of your study data. The portal can be accessed by study sites, sponsors and CROs for central communication and critical decision making.

This eClinical suite uses the latest in today's technology to revolutionize and redefine integrated clinical software. TrialStat enable you to use one system for all clinical phase including, form build your own EDC for Phase I; to advance EDC, CTMS, and Portal Functionality for Phase II and III; to flexible electronic patient access for utilizing late phase. TrialStat eClinical Suite is a fully scalable solution that deploys trials in 2-4 weeks, recongnizes efficiencies, and provides one system that enables you to visualize and enhance your clinical development lifecycle.
