TeleTracking and GE Healthcare collaborate

19 June 2015 | News | By BioSpectrum Bureau

TeleTracking and GE Healthcare collaborate

GE Healthcare and TeleTracking Technologies announce a new collaboration agreement. The collaboration enables GE to place greater focus on its asset and workforce optimization solutions while leveraging TeleTracking's patient flow solutions and integrated operational platform.

The two companies will work together to transition all interested clients currently on GE patient flow solutions to suitable TeleTracking solutions. Additionally, GE and TeleTracking will look to drive improved operational outcomes while reducing the cost burden placed on providers.

Over time, the two companies will help health systems drive further operational efficiencies through shared data and analytics. Larger data sets from multiple technology sources including, among others, asset management, hand hygiene compliance monitoring, bed and patient tracking, and staff scheduling will provide hospital leaders with more detailed insights to improve daily operations and patient access. The collaboration also leverages both companies' strengths in real-time location enablement.

"TeleTracking and GE Healthcare have long led the development of technologies that improve hospital operations. This alliance supports our strong commitment to integration with all like-minded healthcare IT leaders, for the betterment of patient care," said Mr Michael Gallup, president, TeleTracking.

"We look forward to advancing the shared aim of both companies to improve healthcare delivery by improving hospital operations and reducing unsustainable wasteful spending in our industry," said Mr Joe Shrawder, CEO, GE Healthcare Global Services.
