Sartorius ProControl@Enterprise goes mobile

SPC@Enterprise, Sartorius Intech's offering, has been moved to the mobile platform. Already available in the market and known for its use in process control and quality assurance, the software platform has now been updated to seamlessly integrate with all mobile devices. They will be used as input and output terminals. The update helps consumers react faster to drops in production efficiency, cutting down resource wastage and production costs.

The device works by taking information from across the production line. It offers a detailed analysis of how to improve operational excellence. The new step taken to improve efficiency ensures that the SPC@Enterprise is compatible with Microsoft SQL databases and operating systems. This allows manufacturers to access processes from anywhere through cloud or otherwise. It is also useful to food manufacturers because of its compliance with IFS, BRC and ISO22000.

The SPC@Enterprise has also been made compliant with Windows 8/8.1. The third version of the software will work on windows 10 devices.
