

Dr Xuan continues: "With regards to future indications, Roche currently has a broader development program for atezolizumab in bladder cancer, with the IMvigor 211 Phase III trial evaluating the drug in comparison with standard-of-care chemotherapy in patients with relapsed urothelial bladder cancer.

"Additionally, the IMvigor 010 Phase III trial will evaluate atezolizumab as an adjuvant therapy in early-stage, PD-L1-positive, muscle-invasive bladder cancer patients, who are at risk of recurrence. The potential to expand into multiple indications will make this drug an important player in a wave of long-awaited bladder cancer treatment innovation."
