A new pipetting solution by Eppendorf

The new epMotion 96 from Eppendorf provides an ideal, time-saving solution when working with 96 or 384-format microplates or deep-well plates in lifescience research, pharmaceutical, and industry laboratories. It allows easy, rapid handling with high precision and accuracy compared to multi-channel manual pipettes. It can dispense into 96 wells at the same time, making it possible to simultaneously start or stop a biological assay for all the wells in a plate.

"The latest addition to the Eppendorf epMotion range allows pipetting tasks to be completed faster and more precisely. With the new epMotion 96, you can pipette entire 96-well plates at once, which makes a huge difference to productivity and efficiency," said Dr Carsten Buhlmann, international product manager, Eppendorf.

The epMotion 96 has a volume range between 0.5 and 300Ã?Â¼L. It comes with the eppendorf software concept and a touch screen control. Its small footprint makes it suitable for use in busy laboratories.
