Quest Diagnostics CIO wins 2017 Forbes Innovation Award

02 May 2017 | News

The award, presented during the Forbes Innovation Summit on April 24, recognizes CIOs of multibillion dollar companies who have demonstrated the ability to generate value through innovation.

Quest Diagnostics, the world's leading provider of diagnostic information services, announced that it’s senior vice president and chief information officer Lidia L. Fonseca has received a 2017 Forbes CIO Innovation Award. The award, presented during the Forbes Innovation Summit on April 24, recognizes CIOs of multibillion dollar companies who have demonstrated the ability to generate value through innovation.

Ms. Fonseca was recognized with the honor largely on the basis of the company's Quanum™ data analytics and information technology solutions, which help providers and health plans connect across the healthcare ecosystem and analyze health data to improve quality, health and financial outcomes.

QuestQuanum offerings are divided into two solution sets: Analytics, which include population health management and quality reporting technologies, and Clinical and Financial (formerly known as Care360), which includes revenue cycle management, patient engagement and practice management tools.

Ms. Fonseca leads the enterprise-wide Information Technology (IT) function for Quest Diagnostics with an emphasis on using IT and data to drive business transformation and better customer experiences. She is also a member of the Board of Directors of Tegna, Inc.

The Forbes CIO Innovation Award ceremony took place during the 2017 CIO Summit, a gathering of influential CIO leaders that explores today's biggest technological challenges, fosters deep collaboration and generates new ideas.
