

Beckman Coulter introduces new clinical management tools

31 July 2017 | News

The strategic combination of tools is expected to help laboratories achieve greater operational excellence and efficiency, and empower more confident decision making.

Beckman Coulter Diagnostics introduces its DxONE information management solutions, an integrated system of technologies and capabilities, designed to ease data access and usability.

DxONE is designed in response to the increasing challenges faced by laboratory technicians to expedite result times, reduce costs, maneuver personnel shortages and navigate network consolidations.

The suite of next generation technologies applies cloud-computing to provide remote-access functionality for an “answer anywhere, anytime” approach to care and laboratory activities.

The strategic combination of tools is expected to help laboratories achieve greater operational excellence and efficiency, and empower more confident decision making.

The DxONE suite of information management solutions form a cohesive system of products designed to improve efficiency, give insight into operations throughout an entire network and create a more comprehensive understanding of laboratory performance.

The DxONE integrated system of information management solutions represents Beckman Coulter Diagnostics’ role as an information and test consolidation partner for laboratories seeking to create better efficiencies and quality in patient care.

It further expands the portfolio of clinical diagnostic solutions offered by the diagnostic companies of Danaher Corporation, which include Beckman Coulter, Cepheid, Leica Biosystems, Radiometer, and SCIEX Diagnostics. The breadth of this portfolio extends from the established to novel diagnostic technologies for clinical and anatomic pathology laboratories and point-of-care testing.
