

## Stopping Addictions Before They Develop

20 August 2021 | News

**We live in a world where addictive behaviors and substances are easily available, ranging from ones children encounter at an early age in video games, to the more damaging ones such as drugs, alcohol, and gambling.**

Treating people who have developed a fully-fledged addiction can be difficult, which is why addiction prevention is the best thing we can do to make sure that as few people as possible are affected by the illness.

Today, we know that physical and psychological addictions are real illnesses that require real attention and treatment. But, the first to look at is how to recognize addictive behaviors and how to distinguish them from normal leisure activities that so many people get involved with.

To do that, let's talk about a few common addictions in this modern era, and how they can turn into addiction if left unchecked with certain individuals.

### Video Gaming

Video games are a very common pastime in this age and people of all ages and sexes seem to enjoy them to some degree. However, the less known fact is that video gaming can easily [turn into a real addiction](#) that can have very real consequences.

Most children these days are first introduced with video games at a fairly early age, and this is the best time to make sure they are not over-exposed. By teaching your children that video games should be consummated in moderation, you can make great strides in preventing potential addiction later on.

Most people who fall into the addiction trap of video gaming are in their teen years, when video games can be a great substitute for lacking social life, self-esteem, and other factors. If you notice your kid spending more than a couple of hours a day in front of the screen, it may be time to consult an expert and get ahead of things.

### Gambling

Gambling has always been a popular vice and one of the most addictive types of behaviors out there. In recent years, we have seen an increased access to gambling, as online gambling sites have allowed people to gamble for real money from the comfort of their homes.

Of course, not all betting or participation in games of chance can be considered as addiction. As you can see in this [Dafabet review](#), the online betting sites provide leisure for millions of people who enjoy recreational betting, without any serious consequences.

Yet, it is very important to be honest about your own gambling issues or those of your loved ones. The moment things start escalating and you are investing money you need for other things into your gambling hobby, you may be in over your head and looking for help would be a good idea.

## **Alcohol and Drugs**

Alcohol and drugs are among the most common addictions simply because they are so available, and they make us feel so good. Most people in the Western world are exposed to alcohol in their teen years, while drugs can often be encountered in the early youth as well.

The [addictive nature of synthetic drugs](#) is such that the single best tip for addiction prevention is to stay completely clear of them. Alcohol, on the other hand, is not as addictive and can be consumed in moderation without becoming an addict.

Yet, in both cases, the best thing you can do is listen to your friends and family. If they notice changes in your everyday behavior and call you out on it, you should realize that the substances are changing your behavior patterns and it is time to change your habits, even if it means going into rehab.
