

Cardiotrack collaborates with iMMi Life for cardiac care

15 September 2017 | News

The hand-held IoT device of Cardiotrack that is driven by Artificial Intelligence (AI), captures clinical grade ECG data using cutting-edge technology and ensures data portability through smart devices.

Cardiotrack, a health-tech start-up has now entered into a collaboration with Chennai-based iMMi Life. The latter will be deploying Cardiotrack at their centres.

The hand-held IoT device of Cardiotrack that is driven by Artificial Intelligence (AI), captures clinical grade ECG data using cutting-edge technology and ensures data portability through smart devices. It will create an ecosystem that provides effective and timely diagnostic solutions to people facing imminent heart problems.

iMMi life has a network of cardiologists who extend their expert guidance through a mobile app to hospitals on a 24x7 basis. The Cardiac Advisory service of iMMi Life enables prompt and reliable ECG interpretation during emergencies as well as for early detection of heart risk conditions. Hence, deployment of Cardiotrack's easy-to-use, hand held ECG device at iMMi Life's client hospitals will ease the process of acquiring ECG and obtaining a cardiologist's opinion.

The future of better healthcare facility lies in the use of technology that can minimize delay in diagnosis and provide real-time assistance to patients and doctors for timely treatment. With cardiac related issues being one of the biggest challenges facing healthcare, collaborations such as these can provide immediate and effective solutions and change the way healthcare delivery is done in India.
