

## Health Ministry launch India Hypertension Management Initiative with ICMR

29 November 2017 | News

**Reducing the disability and death related to cardiovascular disease (CVD by improving the control of high blood pressure (hypertension), reducing salt consumption and eliminating artificial trans-fats, leading risk factors for CVD is the main aim of IHMI**

Preeti Sudan, Secretary, Ministry of Health & Family Welfare and Dr. Soumya Swaminathan, Secretary, DHR and DG, ICMR has launched the India Hypertension Management Initiative (IHMI) recently in New Delhi.

Reducing the disability and death related to cardiovascular disease (CVD by improving the control of high blood pressure (hypertension), reducing salt consumption and eliminating artificial trans-fats, leading risk factors for CVD is the main aim of IHMI.

Also present at the event were Manoj Jhalani (AS&MD, NHM), Dr BD Athani (Special DGHS) and Pawan Aggarwal, CEO, FSSAI and Dr Alka Aggarwal Singh, Country Director, Vital Strategies along with the other senior officers of the Ministry and representatives of international development organizations.

The India Hypertension Management Initiative (IHMI) is a collaborative project of Indian Council of Medical Research (ICMR), Ministry of Health and Family Welfare (MoHFW), State Governments, World Health Organization (WHO), and Resolve to Save Lives initiative of Vital Strategies. The primary goal of this project is to reduce morbidity and mortality due to CVDs, the leading cause of death in India, by improving the control of high blood pressure, which is a leading risk factor for CVDs among adults in India.

The IHMI is focused on five essential components of scalable treatment of hypertension. It will support the adoption of standardized simplified treatment plans for managing high blood pressure, ensure the regular and uninterrupted supply of quality-assured medications, task sharing so health workers who are accessible to patients can distribute medications already prescribed by the medical officer, and patient-centered services that reduce the barriers to treatment adherence.

Data on hypertension will be improved through streamlined monitoring systems, and the lessons learned and practice-based evidence will inform further interventions to improve cardiovascular care. IHMI will be progressively rolled out in 25 districts in the first two years across districts selected by the Health Ministry for expansion of active screening and intensification of treatment activities for hypertension.

Preeti Sudan underlined the various aspects of the non-communicable diseases like prevention, detection and management.

She stated, "Creating awareness about NCDs is vital as it is a silent disease. There is urgent need to raise awareness about NCDs amongst families regarding packaged food and processed foods with excessive salt and trans-fat."

She also highlighted the need for incorporating yoga in one's life for prevention and management of hypertension.

Dr. Soumya Swaminathan highlighted the importance of initiating and managing treatment for hypertension. She emphasized on the need for public education programme on nutrition and training of frontline healthcare workers regarding management of hypertension.

She stated, "The risk factors have to be managed at a very young age and we need to look into behavioral issues related to food intake, especially salt."

Dr Henk Bekedam, WHO India Representative, highlighted the importance of awareness and detection of hypertension. He congratulated the Health Ministry and ICMR for this initiative and said that this programme will help with the management of hypertension in the country.
